Deliverables

The ARREAU Action Group will produce a number of deliverables, such as:

1. An overview of current viable and profitable European value chains, involving the efficient and profitable recovery and application of phosphorus (struvite) and cellulose from wastewater treatment, and granular iron hydroxide and calcium carbonate from drinking water production.

2. A framework for the further exploitation and development of viable resource value chains throughout Europe.

3. An overview of potential new regional markets and business opportunities for resource recovery from the water cycle.

ARREAU - Accelerating Resource Recovery from the Water Cycle

To develop market plans for viable and profitable value chains for resources from the water cycle

1. Value chains for drinking water residuals, phosphorus, cellulose and cross-cutting issues
